
Page Source: PDF

Posted by sarcas28 - 2016/05/07 08:55

Hello,

I bought the product a few days ago and I am trying to configure the extension. I have read the documentation and nothing comes about Page Source: PDF (when you create a new Book)
I managed to run only through the Extension Option Page Source: Image

Some tutorial or help on how to put a PDF as Book directly?

Thank you so much!

Hello,

Open "Page source" tab on book settings page, enter path to a PDF file in "Choose a PDF file" parameter. For example if want to show /images/books/my_book.pdf file, populate the parameter with images/books/my_book.pdf value. Select also how to process the PDF file (use "Convert PDF using" parameter for this purpose). It is possible to convert PDF file to images via CloudConvert online service (it requires to register on cloudconvert.com site and generate API key, after this enter the API key in "ARI Smart Book -> Config -> Import settings -> CloudConvert settings -> API key" parameter). PDF file can also be convert via GhostScript. It should be installed on your hosting and path to executable GhostScript file should be entered in "ARI Smart Book -> Config -> Import settings -> GhostScript settings -> Path to Ghostscript" parameter.

Regards,
ARI Soft

Hello,

I test it but don't result. I take a lot of screenshots to explain me.

Thank you!

Populate "Choose a PDF file" with images/books/Acesta_Este_Secretul.pdf value instead of /images/books/Acesta_Este_Secretul.pdf (in other words remove leading slash because with leading slash it will be an absolute path and the extension will try to load the file from root folder of web server).

Hello,

I insert this value "imagens/books/my_file.pdf" and i take a screenshot of result.
If you want and its possible to make a Video showing the steps to config for a great result.

Thank you!

Hello,

Download the updated extension in "Member Area" on our site and upgrade it on your site. "PDF" source should work fine in the new version.
