
2 sizes of image pages for better performance

Posted by Miktowers - 2016/05/30 00:46

Hi good people!

I've got a book with 60 pages. Each page is an image with images and text. Is it possible to load first a low res image, and if you want to zoom a page, then load a hi res file.

I think it could be more light to load all the book.

Thank you!

Hello,

Currently the extension doesn't support this ability, but it is possible to use lazy loading for images. In this case the extension will be loaded images only for currently opened pages. Open "ARI Smart Book -> Templates" page, open settings of the template which is used for the book, open "Book settings" tab and set "Images lazy load -> Enable" parameter to "Yes".

Regards,
ARI Soft
