
Link pages

Posted by Walder - 2016/07/12 11:05

Hi,

I'm using Smart Book on one of my websites and I wonder if it's possible to add links to pages?
The book is generated from images I've uploaded (not from articles).

Thank you in advance,

Guy.

Hello,

If you want to define a link for the whole image into a book, it is possible to define links in CSV file. CSV files should be located in folder with images and name of the file is defined in "Description file" parameter. See here description of "Description file" parameter.

Hi,

I've managed to link items but the link is only active when I zoom into the page and not with default view. I used articles as source for the flip book. Any option to activate the link even when normally viewing the book?

Thanks again,

Guy.

Hello,

Could you provide a link to a page with the book?

Regards,
ARI Soft

Wow, that was quick :) Thank you.
It's still running locally. But I can have it setup online quickly and send the link.

Try to upgrade the extension to the latest version (v. 1.4.0 is used on your site, but the latest version is 1.10.2) and clean browser's cache.

Yap :) That was it. Thank you for your quick and kind support.
Any suggestions why my icons are gone now?

Hi,

One last question that I've asked in my previous post. After the update the icons where gone. I've deleted my cache and tried several things but nothing. On my local server it works great but on the live website I'm getting the following errors in the console:

http://iwwaportal.co.il/media/arismartbook/css/fonts/icon_book.woff?-vqfr7h Failed to load resource: the server responded with a status of 403 (Forbidden)

http://iwwaportal.co.il/media/arismartbook/css/fonts/icon_book.ttf?-vqfr7h Failed to load resource: the server responded with a status of 403 (Forbidden)

Any suggestions please?

and again, thank you for all your help.

Hello,

It looks like a problem with configuration of .htaccess file or some security rules on hosting. It blocks requests which contains a GET variable which starts from "-" symbol. As possible solution you can edit /media/arismartbook/css/icons.css file and replace ?-vqfr7h code with ?vqfr7h code. After this clean browser's cache.

Regards,
ARI Soft
