
Configuration can not be saved on hosting

Posted by RobeMedworld - 2016/09/06 11:54

Hi there,

I have the extension installed in a shared hosting (as well as copy on my local XAMPP).
When I try to change the configuration it doesn't save but gives me this error message:

Method Not Implemented
POST to /administrator/index.php not supported.

It's a problem with the hosting because local it saved.

Any idea? Your help will truly be appreciated.

Thanks

Renã©

Hello,

It looks like a problem with rules in mod_security module for web server. Contact hosting support so they check it.

Regards,
ARI Soft
