can\'t choose book

_____

after the recent updates joomla, by pressing the select button on the mod_arismartbook open a new tab, instead of the window and there is no possibility to choose the book, that should be displayed on the module. Can somebody help me with this mod, please? http://www.ari-soft.com/images/fbfiles/images/ari-e5999e3d79da5ee85de30f732bbeed80.JPG

Re:can\'t choose book

_____

Hello,

Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft

Re:can\'t choose book

_____

Hello

I want to add books in my module with the "Book" button.

Question1 (it's the same problem abave...)
This is impossible because the window lists the books but I do not have the "OK" or "Validate" button !

Question 2
Is it possible to add multiple books to have a complete category in one module? http://www.ari-soft.com/images/fbfiles/images/Smart_Book_Pas_de_bouton_dans_module-200033bfafcde08677dcf2ac2f09d49e.jpg

Thanks a lot !

Re:can\'t choose book

_____

Hello,

1. Click by a book name to select the book.

2. It is not possible. If you want to show all books from the selected category, it is possible to create menu item with type "ARI Smart Book -> Category".

Regards,
ARI Soft

Re:can\'t choose book

_____

Hello

Thank you for your prompt response but...

1. I can indeed click on the name of a book but how to validate this choice? I have no button in the window and when I click on the name nothing happens ... the window remains displayed.

2. OK is very good, it is indeed what I wish to have but how to get this result inside an article that contains other information (before and after the display of the list of books)?

_____

For the 1, i have an explication...

The name of the book contains a special character.
Examples:

"A l'Ã¢me soeur"
"Mode d'un jour, mode de toujours"

If I write

"A l Ã¢me soeur"
"Mode d un jour, mode de toujours"

Everything is working...

There is thus a bug in the management of this input because the characters "'" block the process. This character is obligatory in different denominations in different languages and in particular in French.

_____

1. Sorry for inconvenience. We fixed this bug. Download "ARI Smart Book" v. 1.10.5 and upgrade it on your site. If the problem occurs again, clean browser's cache.

2. The modules doesn't support this ability. Books from the selected category can be shown only if create menu item with "ARI Smart Book -> Category" type.

Regards,
ARI Soft

_____

Problem 1

It's OK now with the new version. Thanks a lot !

Problem 2

I have found a solution...
I'm using the extension "Components Anywhere" from "Regular Labs" :
https://www.regularlabs.com/extensions/componentsanywhere

1) Create a menu item with the "ARI Smart Book - Category" (If you don't want to see this menu item on your menu, for exemple 'mainmenu', you can create a another menu, for exemple 'menubooks' without module on it !
2) Copy the URL of the menu item, for exemple "index/fr/linkbooks" and create a module with these informations :

* on the content of the module : 1 line '{component index/fr/linkbooks}'
   * on the position : exemple 'posbooks'
4) In your article
   * on the content : {loadposition posbooks}

For me it's OK...

_____

For the point 2...

I have a solution...
You can use the extension "Components Anywhere"
https://www.regularlabs.com/extensions/componentsanywhere
