Hello,

If you want to create a book which will show images from the selected folder(s), open "ARI Smart Book -> Books" page, click "New" button and select "Images" value in "Pages are created from" drop-down and click "Continue" button. After this open "Pages source" tab on book settings page and enter path to folder with images in "Directories" parameter. For example if images are located in /images/books/my-book folder, populate the parameter with the following value:

images/books/my-book

That's all. It is possible to create a link to the book in Joomla! menu manager, load it via "ARI Smart Book" module or plugin.

Regards,  
ARI Soft

---

Could you provide a link to a page where the problem occurs and specify what value is used for "Pages source -> Directories" parameter in book settings?

---

Hi can you please build a sample on my website so i can know exactly how it works.

Thank you

---

We can build a sample book if you provide a temporary access to your J! backend by email and specify path to a folder with images which you want to show in the book.

---

Hi the url is <http://rbseb.org/administrator/index.php> user and password is \*\*\*. you can use any folder for the images.

Thank you

---

We configured "Imag" book (ID = 16). You can see it here. It shows images from /images folder excluding sub-folders.

---

Do you want to show page with books description like here? If yes, create menu item with "ARI Smart Book -> Category" type in Joomla! menu manager. Thumbnail can be set in book settings, see "Thumbnail" parameter. If you mean something another, could you provide a link to the page with the sample book?

---

Great I got it now. Can you tell me how to modify "the OPEN THE BOOK" text to read more.

=====

## Re:Configuration

Posted by admin - 2017/11/26 14:30

---

All labels are located in INI file. You can read here how to create a new translation or edit an existing one. "Open the book" label is located in /language/en-GB/en-GB.com\_arismartbook.ini language file.

---

Try now. It was a problem with "timeline slider" module. It loads own copy of jQuery library instead of using jQuery instance which is added by Joomla! We disabled jQuery loading in module settings.

Open "time slider" module settings page. It contains something like "Include jQuery" option.
