## link book pages to url

Posted by cklofts - 2019/01/03 22:55

---

I am trying to link ARI smart book pages to url links and I have not yet had success. I tried to follow the directions in the user guide to set the template type to content and use the description file, but it didn't work the way I set it up. It was not all clear however.

First, there was no template parameter for content so I copied the default template and named it content. Also the CSV file I filled in with the appropriate information but I didn't know what to name it. I put it in the pdf\_import folder in the appropriate folder for the book. Then I tried it with the name arismartbook.csv and it didn't work, and I tried it with the name of the book, printportfolio2016.csv .

Hoping you can help.

Thank you,  
Cindy

Hello,

If a book is created based on images then custom parameters for pages can be defined in a CSV file. The file should be located in folder with images. For example if book is based on images from images/book1 folder and folder contains page1.jpg and page2.jpg images, add arismartbook.csv file to this folder with the following content:

```
"File","URL"  
"page1.jpg","http://www.ari-soft.com"  
"page2.jpg","http://google.com"
```

Open "Pages source" tab on book settings page, select "content" option in "Choose template type" drop-down and populate "Template" parameter with the following value:

```
{ $bookimage }
```

Regards,  
ARI Soft
