
Pictures in Article got cutted in Full-Screen

Posted by peterrothe - 2019/02/21 00:24

Hello,

i'm just playing arround with the extension and have a question now:

I have multiple articles with only one pic (A4) in it and made it to a book. worked.

but when i open the book in full-screen, then the picture gets cut and the lower part ist lost.

test-link: <https://relax.ninja/ari-book-test>

and - while i'm asking: is there a possibility to set the size for printing? so pictures in article are full size then?

Why I'm using articles with pictures instead of "only" pictures: some of the images/pages should go online on a specific date and this is easier to set with articles :)

thank you

kind regards http://www.ari-soft.com/images/fbfiles/images/ari_smartbook_fullscreen_kl.JPG
