
Using Joomla Lightbox

Posted by foxywd - 2019/11/28 10:27

Hi, I tried to check the documentation but I couldn't find the process to make the book shows in a Joomla Lightbox like in your demo page.

I've already set the setting "Open in lightbox" to "Joomla Lightbox" in Navigation part, but other than that, what else should I have to do to get it working properly? <http://www.ari-soft.com/images/fbfiles/images/1-eda031a8b2cc0e674a5564f681d8016a.png>

Hello,

Could you provide a link to a page where the problem occurs?

Regards,
ARI Soft

Hi, thanks.

The website is still under construction but you can check the url here:
<https://ramirezocampo.foxywd.com/en/catalogues>

As you can see, although it's configured to show in a lightbox, it still shows like a normal in-page flip.

Let me know if you need access to the backend area.

Thanks.

Carlos C.

It is not possible to open the page. The following error occurs:

<http://www.ari-soft.com/images/fbfiles/images/book-edc81fc9609c64aa53b72b64434af7e9.jpg>

Hi, Im so sorry, we were finishing the project and it was temporarily blocked.

Please you can check the problem here:
<https://ramirezocampo.com/en/catalogues>

All those books are setup to be shown on as Joomla Lightboxes but they are shown normally.

Thanks

Lightbox option is applying for "Open book" link when "ARI Smart Book -> Category" menu item type is used. It seems in your case you load books one by one via plugin/module.

Hi, thanks a lot for your answer.

Im so sorry for the delayed answer, we were on holidays.

I tried to make the lightbox as you said, but it looks like it wont work, or I can't figure out how.

This is the link for the sample: <https://ramirezocampo.com/en/test>

There I created a menu item with "ARI Smart Book Â» Book" type and then on the page I created a link to that item on the text "Lightbox". Of course the book has the Lightbox option activated with Joomla Lightbox. So it wont open the lightbox, did I do something wrong?

Let me know if you want access to backend to check on your end.

Thanks.

Hello,

As we wrote previously, it should be "ARI Smart Book -> Category" menu item type. If you provide a temporary access to your J! backend by email, we will create a menu item for you.

Regards,
ARI Soft

Problem solved, Thanks a lot.

Just for the record, the problem was the visualization beign affected by the template, so I was told to add the following CSS code to my template:

```
.ari-smartbook-container .modal {position: static;display:block;}
```

And this solved the problem.

Thanks a lot.
