
Subcategory: Name is not unique

Posted by Adamowicz - 2019/12/18 08:45

Hello

I need to set up a categorization structure like this:

folder

--- Year 2014

--- Year 2015

FolderB

--- Year 2014

--- Year 2015

I can't do this because I have the message: "Name is not unique"

I understand this message, but is there no way to achieve just such a structure of a subcategory?

I need this menu structure because I have over 1 million scans divided into years and I need to organize it this way.

Regards

Mariusz

Hello,

Please download "ARI Smart Book" v. 1.10.16 in "Member Area" and upgrade it on your site. The latest version supports ability to create sub-categories with the same name for different parent categories.

Regards,

ARI Soft
