Z-order

Posted by robertbrandes - 2014/09/14 20:50

_____

I have used the non-pro version of the Carousel and I have noticed a problem with the Z-order with the Pro version. The image in the front sometimes is overlapped by the left or right image. this was not the case with the non-pro version.

the z-order is also a problem with a drop down menu.

non - Pro version at caccaweb.com
pro version at gallery.caccaweb.com

Thanks.

_____

Hello,

This problem with fix from this post. Use position:static property instead of position:relative:

```
.ari-cloud-carousel .modal {
position: static;
left: auto;
top: auto;
margin: 0;
width: auto;
border-style: none;
}
```

Regards,
ARI Soft
