Works fine, but ...

you must decide to display the picture in the Sexy Lightbox, or the Link.

My Customer wants to see the picture, and then clicking on the picture to open the link (or a link in the description itself).

It is a special question but an idea for the next version - running on Joomla 4 ???

Re: compability with latest version of joomla

Posted by varnenka - 2019/10/28 15:07

Is that module is compatible with latest version of joomla - 3.9.12 or not?

I want to upgrate my web site, but ari data tables works now with joomla 2.5.1.

Please, answer me as soon as possible.

best regards

Svetoslava Nikolova

I have purchased this module a long time ago - 2013, is that package compatible with the latest version or there is another version newer than 2013 year or there is another version - newer?

To varnenka: could you specify what error occurs? Is it possible to see the problem anywhere?

Regards,
ARI Soft

Hi ARI Soft,

We are having a similar issue at www.f3a.com.au with the quiz crashing when tables are used in the Text Templates.

We have recently moved hosts and PHP was upgraded from 5.6 to 7.2.

We installed the latest version of your plugin too but the problem persists.

When a table is inserted this is the error message on screen:
Call to undefined method DOMText::getAttribute()

Any ideas?

Regards,
Jason.

Hello,

Could you provide a direct link to a page where the problem occurs?

Regards,
ARI Soft

Here you go. It's a short two question quiz for testing.

<https://www.f3a.com.au/judging/test-exam>

It looks like we might have the name and email being pre filled from the last person too. We've had this in the past and I think you gave us some code to stop that.

I'm also told that when editing template they don't always save the changes.

Cheers,
Jason.

Hello,

We don't see any problem when complete the quiz. Browser's console is empty and results are shown fine:

<http://www.ari-soft.com/images/fbfiles/images/quiz-8575877a7e12a15d839b04dbf625f5cc.jpg>

Could you send a screenshot where possible to see the problem? What browser do you use?

The form can be pre-filled with name/email of last quiz taker if you use one computer for different users. You can comment the following code in /components/com_arquiz/views/quizform/guestform/view.html.php:

```
$data = AriUtils::getParam($_COOKIE, 'aq_email', '');  
$data = AriUtils::getParam($_COOKIE, 'aq_name', '');
```

Regards,
ARI Soft

Hi ARI,

The browser used is Safari. I have also tried Chrome with the same results.

Screen shot attached.

Cheers,
Jason. http://www.ari-soft.com/images/fbfiles/images/7A306DE0_4099_48D1_95C3_1DDE9A63A5BB.jpeg

Further to my last post, I™ told the following:

They didn't get the error because they didn't pass the quiz. The error appears when trying to generate the emailed template (I believe). I've changed the quiz setup to do the same if the quiz is failed. Eg: It will now attempt to email the same template.

Thank you for the explanation. Now we see the error. Could you grant a temporary access to your J! backend by email so we can investigate the problem? It occurs on server side and we can't reproduce it on our test server.

Regards,
ARI Soft
