

CSS file location and responsiveness

Posted by dtws2008 - 2015/08/03 20:52

1. Where can I find the Orgchart css file. I use the Arismartcontent extension.
2. Is the orgchart plugin responsive?

Hello,

1. The plugin uses Google Chart API to create org charts. Element styles are loaded by Google's scripts. /media/arismartcontent/orggchart/css/style.css CSS file is used to load custom styles for org charts.
2. Yes, but some minimum width is required to show all nodes in horizontal.

Thanks. Can You please show me how the demo org chart in your site was created? I mean the css behind it. I can see in the chrome inspector that the node box is styled by:

```
hr {  
  margin: 18px 0;  
  border: 0;  
  border-top: 1px solid #eee;  
  border-bottom: 1px solid #fff;  
}
```

I don't know how to make my org chart node, looks the same.

These styles are defined in a site template CSS file. Custom CSS rules can be also added in {styles} tag. It will look like:

```
{orggchart id="militaryChart" size="large" allowCollapse="1"}  
{node}  
  General  
  
  Jack Black  
{node}  
  Colonel  
  
  John White  
{/node}  
{node}  
  Colonel  
  
  Nick Brawn  
{node}  
  Captain
```

Jerry Orange
{node}
Sergeant

Larry Gray
{/node}
{/node}
{node}
Captain

Walter Pink
{node}
Sergeant

Jim Purple
{node}
Private

Alex Yellow
{/node}
{node}
Private

Terry Blue
{/node}
{node}
Private

Eli Red
{/node}
{/node}
{/node}
{/node}
{/node}
{/node}
{styles}
#militaryChart_chart .mil-name {font-size: 0.8em;font-style:italic;color:red;padding: 5px;}
{/styles}
{/orggchart}
