## question for developers

Posted by amigos - 2015/01/17 10:59

---

Hi. Sorry for my bad English/

I bought Social harvester and I am very pleased. I would like to have one function, if possible. So that when you click on the link of the Social Stream (YouTube or Vimeo), not to get to the new page. A link to a video or immediately opens in sexy lightbox.

I will wait for your reply.

Hello,

Check your mail please. We have sent the updated component.

Guys, I do not expect you to do it so fast, yet free, thought at first we will discuss)) I will recommend your company to everyone. Your extension is very good and inexpensive, I leave a good overview on joomlaextensions.

Then my question is, you sent me an updated component, it only video links will open in a lightbox?

Is it possible to make all links open in a lightbox? And twitter and facebook to not let visitors from the site. A very important feature, because your unit does not only attract people to your site, they leave the site on links. They can not let go))

In any case - thanks. I'm happy I found your company.

Trying to find differences. I can not understand how it works. I need somewhere to indicate that the references should be sent to LIGHTBOX? Or is it going to happen automatically? I have an old Lightbox tomorrow buy a new one, the old probably something wrong.

I wrote a review about Harvester on JoomlaExtensions, my nickname kz-rus. And I forgot write site address, where the component is installed: kz-rus.kz

Fill out there in the response, please, and then I can not edit it.

---

The extension integrates with "ARI Sexy Lightbox" extension automatically. For this install "ARI Sexy Lightbox" module from ARI Sexy Lightbox package and then install, configure and enable "System - ARI Sexy Lightbox" plugin. The

---

updated extension shows YouTube and Vimeo videos into the lightbox. We will investigate possibility to show other links into the lightbox and let you know about results soon.

PS: Thank you for your review.

Regards,  
ARI So

In addition, sorry, but it is not possible to show Facebook and Twitter pages into a lightbox because Facebook and Twitter prevents loading of their pages into elements.

Hi.  
I installed the module as you said, everything works fine. Thanks for the update. Now this question. I need to translate the inscriptions, which are displayed in the module, such as "twitted", "uploaded", "hrs", "mins ago". I did not find them in the file "en-GB.mod\_arisocialharvester.ini". Where I could edit them?

---

See "Intro link text" parameters in module settings. Other labels are defined in javascript file. We can send unminified version of javascript file by email.
