
No Thumbnails displayed

Posted by werram - 2016/06/15 17:18

Hello!

I just set up my social wall. Unfortunately no thumbnails are displayed.

I filled the wall with content from vimeo, youtube, deviantart and instagram. None of them are showing thumbs. To make sure that my template doesnt cause any conflicts I switch to beez. Still no thumbnails.

Any ideas on why this is happening? I left most of the parameters untouched.

Thanks in advance!

Hello,

Thumbnails are hidden in wall view. If want to show them, open /media/arisoalharvester/css/dcsns_wall.css file and remove or comment the following code:

```
.dcsns-wall .stream li .section-thumb img, .dcsns-wall .stream li .section-text img {  
    display: none;  
}
```

After this clean browser's cache.

Regards,
ARI Soft

Hello! I was able to display the pictures, thanks!

One last problem:

When I load the page, the feed elements overlap each other (Attach 1). After clicking on one of the filter options, they are fine. (Attach 2)

EDIT: wasnt able to add attachments, will send them via mail if needed.

Upgrading to 1.2.2. hasn't solved the problem for me unfortunately.
Switched to beez to make sure it's not a problem with the used theme

To see it live, click here: <http://www.sabine-lutzbauer.at/index.php/pinnwand>

EDIT: Error occurs in Opera, Mozilla and Chrome. Wall works fine in IE
