Module abandoned?

Posted by sydweb - 2019/09/30 07:21

_____

Hello, has this module been abandoned?

It seems like at least Facebook and Instagram feed loading is broken on the demo page http://www.demo2.ari-soft.com/joomla-social-harvester/social-stream.html?_

Can this be fixed?

_____

I am using the "ARI Social Harvester" for quite some time now and it worked as expected until last month Facebook-feeds stopped working. Twitter still works.

I guess this has to do with Facebook basically shutting down access to their API.

In order for it to have any chance of working again, it seems I will have to go through their process of "App Review".

I have to:
â€¢ Explain in text what I would like to do.
â€¢ Upload a "Screencast", which is essentially a video, explaining what I would like to do.
â€¢ Grant Facebook access to the backend of my websites.
â€¢ Create a business manager account.
â€¢ Upload Documents of my company.
â€¢ Sign contracts.

Which is quite ridiculous, considering I just want to display a Facebook-feed on a website.

_____

Hello,

Sorry for the delay. According to new Facebook policy it needs to go through app review on Facebook when need access to public posts. Sorry, but we ca do nothing with this, it is Facebook's decision.

Regards,
ARI Soft
