Facebook App Review

Posted by gdsd - 2019/11/19 09:07

_____

The module does not work with Facebook anymore because Facebook denies access.

Now there are dozens of different permissions, which I can ask Facebook to grant me access.

Here is the list: https://developers.facebook.com/docs/facebook-login/permissions/

Which of these permissions does "ARI Social Harvester" need to work properly?

_____

Hello?

What do I do?

Tried to get access to "manage_pages"

Anwer from Facebook:
"Hello, We suggest that you put your app in development mode, that way you would be able to show us in your screencast how you intend to implement the permission sought."

However if app is in "development mode" nothing shows up on my Joomla website, so I don't know what to do to show how I "intend" to to anything.

Which API-Version do I need to set in Facebook app advanced settings?
