
Slider not starting?

Posted by Thomasius - 2016/01/02 19:16

Hi!

I just transferred my site from local to webserver.
Locally the slider module worked well - on the server it doesn't.
It is in the topmost position (I see a 100%-Mark, nothing else...)

Could you give me a hint to the reason?

www.jagd-altoetting.de

I can give you login data but I am not sure if it is wise to post that into a forum :)

Thank you in advance

Okay...just found it out.
jQuery conflict caused by a cookie consent tool.

Hello,

Have you need any assistance from our side yet?

Regards,
ARI Soft

No, thank you, I just wanted to tell you for future reference if you want that. As far as I am concerned, the thread may be deleted.
