## Random Positioning

---

Hi

I've just installed Layer Slider on J 3.4.8 and the component seems to want to move around the screen, place itself over other elements etc.

You can see the effect at [www.imagineentertainment.co.uk](http://www.imagineentertainment.co.uk)

Sometimes it will load OK, others it will appear under the menu, over the text, or even halfway down the page (especially on page refresh).

The module is the first item on the page and isn't enclosed in any other formatting.

Please advise

=====

Hello,

It seems a javascript conflict occurs. Could you provide a temporary access to your J! backend by email so we can investigate the problem?

Regards,  
ARI Soft
