
Display contents of a Joomla Module on a layer

Posted by itman - 2018/10/23 14:41

I would like to put the contents of another Joomla module into one of the layers. It looks like it should be possible but I cannot work it out. Usually to insert a module in Joomla you have something like {loadmodule dpcalendar_upcoming,EventsDpCalendar}.

If somebody could help me convert the above to what I would need to put into the customer module I would be really grateful.

This is the html I use to view the module from a custom module inside Joomla:-

Â Upcoming Events
Â

{loadposition position1}

{loadmodule dpcalendar_upcoming,EventsDpCalendar}

=====

Hello,

The extension doesn't support this ability.

Regards,
ARI Soft
