Google fonts no available in the combobox

Posted by maramauri - 2019/06/12 11:53

_____

Hello,

In the tab "Google fonts" I added the google font link inserting it in the field "Add Link:", pressed the button "Add link" and just below of the field appears the font added but but actually the font in the website is not changed.
Do I have to set anything else?

The same problem is described here:https://www.ari-soft.com/ARI-Layer-Slider/57170-Googles-fonts-not-showing-up-in-drop-menu.html?_2019061206 but I did exactly as suggested.
It doesn't work.

Any idea to solve it?

Thanks a lot

_____

I forgot to specify that obviously after adding the font, it appears in the combobox and after choosing it nothing changes the site

_____

Hello,

Could you provide a link to a page where the slider is used and a temporary access to your Joomla! backend by email so we can investigate the problem?

Regards,
ARI Soft
