
Google Fonts not loading in dropdown

Posted by officezen - 2022/09/27 03:12

Just installed your component and am playing with it now.

One thing I noticed is after adding Google Font at the top, the text element is not showing the font in the dropdown.

I checked other older forum threads - wondering if this issue is ever fixed/being followed up.

Hello,

The font URL is invalid (400 HTTP error occurs if try to load it). Use the following code:

The font gets added in the dropdown the first time. It looks fine in the slider preview, but in the actual slider on the site the font is not loading up.

Also after saving the slider, the dropdown menu no longer displays the font.

Please check it out in the backend on your end.

It should work in v. 1.1.8.

It's not working with v1.1.8. Please check it yourself in my backend. I already sent you the login info via email.
