## Cannot Select Slider ID for module

Posted by officezen - 2022/09/27 03:56

---

Tried in both Firefox and Chrome - same result.

I see the slider I created in the component in the module popup window, but clicking on the name does not select the slider.

Hello,

Could you specify what Joomla! version is used on your site?

Is anyone looking into this? I haven't been able to use your slider because of this?

We can't reproduce it on our test server. Could you provide a temporary access to your J! backend by email so we can investigate the problem?

We investigated the problem and the problem occurs when a slider contains ' character in name. We will fix this bug in

---

the next version. Currently as a temporary solution you can rename slider and remove ' character.

v. 1.1.7 is available in "Member Area" on our site. It contains the fix.
