
Layer Slider EOL?

Posted by Internaut - 2023/06/05 19:39

I know it says "compatible with Joomla 3.x." When I see "Recent Events" on the right of this screen, dated Nov. 2021, I wonder, hope actually, that Ari Layer Slider will work in Joomla 4. Has it been tried?

I use it on small business card type web sites and people love it.

Another hope, is that there will be some way to port the final results or save-as after build to a video mode, like MP4, even avi.

Thanks ARI for sticking around and for the great support
