Timezone not found

Posted by jackson - 2021/09/22 09:16

_____

DateTime::__construct(): Failed to parse time string (07-10-2021 19:00 pm) at position 17 (p): The timezone could not be found in the database

I recently met this error. Has anyone met this before?
Checked some solutions but no luck to solve it.

Hello,

Could you specify how to reproduce the problem? What source do you use for events?

Regards,
ARI Soft

_____

Hi,

Thanks for the fast prompt.
I managed to fix the issue.

This is due to the timezone at the configuration not being set correctly.
