
Calendari customize event popup screen

Posted by soren.c.olsen@live.dk - 2024/01/10 09:43

Is there any way to customize the popup, when You in the calendar click on an event?

Could you specify what customization you need?

If need small style changes (font color, size and etc.) it can be done via custom CSS styles. If you want to modify layout, it will require modification of event template (require HTML/PHP knowledge).

See `/components/com_calendari/views/event/tmpl/default.php` file.

This article can be helpful. It is about how to override component/module/etc templates.
