control button

_____

Hi

i've just implemented your Before After product, looks great and i like that is both a module and plugin, lots of flexibility

i've implemented it here .... http://op.lloc.com.au/before-after

i have 2 things it would be great to resolve

1. the control button in the center, can this be made smaller?
2. when i slide to the far right or left, i'm still left with a column of information from the photo being replaced. this means you are not able to access the far edges of the images and i'm losing a little of the impact. Unfortunately i cannot zoom out the images, as these are the images the closeness to the eyes that I've been given to work with.

how can i fix these 2 things

peter

Re:control button

_____

Hello,

Add the following CSS rules to a site template CSS file:

.cd-image-container .cd-handle {height:30px;width:30px;margin-left:-15px;margin-top:-15px;}
.cd-image-container .cd-image-label.is-hidden {visibility:visible;}

Regards,
ARI Soft

Re:control button

_____

thank you that solved the size of the button in the centre

is there a way to control the margins at the edge, allowing the slider to get completely to the left or right edge, currently a small margin/column on both sides is not accessible

Re:control button

_____

Download the latest version of the extension (v. 1.1.0) in "Member Area" and upgrade it on your site. The plugin and the module contains "Offset" and "Add offset of drag element" parameters. Set "Offset" parameter to 0 and "Add offset of drag element" to "No".
