## Make the module responsive

Posted by bybloo - 2017/07/24 08:49

---

Dear Customer Service,

I bought this module and the magnifier module. What I don't understand is how to make them responsive.

In fact, if you go to that page using a smartphone:

<http://standbypics.com/index.php/blog/photography-basic-concept>

you can see the images are set with a fixed dimensions in the mobile view port. This breaks the layout and it makes it no-responsive.

if you see the other page in which I didn't use the modules all works well:

<http://standbypics.com/index.php/blog/10-tips-to-improve-your-photography-skills>

do you've some ideas to solve this problem?

many thanks!

Regards,

Fabio

Hello,

"ARI Image Before After" extension is fully responsive. This problem with "ARI Magnifier", it is not responsive. We will try to release new version which will be responsive next week.

Regards,

ARI Soft
