Looking for the right extension

Posted by peppermintpatte - 2017/07/25 08:29

_____

We recently upgraded our music site from Joomla 2.5 to 3.7.3.

We made a lot of changes.

I remember in Joomla 2.5 I had an extension that would display a message popup when the user accessed the site, on the Home Page. It would stay visible for a number of seconds and then vanish OR if the user clicked on the page.

I don't want to display an article, I want to be able to change the message easily. I only need a box and 3 or 4 lines of text.

For example "Welcome to the new site PayPal is working properly now!" or "New Volume 25 now online from Mathieu"

Do you have anything which will do this?

_____

Hello,

If you want to show a splash window when page is loaded (or with some delay), ARI Magnific Popup PRO plugin can be used. It is possible to show a custom text into the popup. It can be shown only once, once per browser's session or always.

Regards,
ARI Soft
