## Error #0: Unable to process JPG image

Posted by Ellsinore - 2017/10/30 10:31

---

Hi!

I asked earlier about using this plugin for a single image:

[http://www.ari-soft.com/ARI-Magnific-Popup/61616-Use-for-Single-Image.html?\\_2017103004](http://www.ari-soft.com/ARI-Magnific-Popup/61616-Use-for-Single-Image.html?_2017103004)

I tried the solution in your response and it isn't working. I thought I just needed to spend more time looking at the options.

But now I'm trying to actually create a gallery. While it *\*does\** show the file names, there are no thumbnails or images displayed.

Here's a link to the page:

<http://alt-support-diabetes.org/index.php/2-uncategorised/11-asd-posters>

Also, the thumbnails are present in the arimagnificpopup cache directory.

So now I'm thinking there must be some kind of server configuration issue, but I'm not sure where to look?

Uninstalled/reinstalled -- working great! Thanks! :-)
