
Problem with the result page layout

Posted by Louis S - 2017/02/16 00:23

I'm using the quiz to sell an ebook, and I've got a big problem with the result layout.

See the attached files.

It's even worse when the height screen is smaller... we can't read everything and definitely can't see the image at the bottom cause it's unscrollable.

Is there a way to fix this ?

Thanks http://www.ari-soft.com/images/fbfiles/images/Untitled_2-2c5aff94b715cbe6a8e4040be4bd7c68.jpg

Hello,

It looks like a problem with theme styles. Could you provide a link to a page where the problem occurs so we can investigate it?

Regards,
ARI Soft

Hi,

Yes the url is <https://www.4elements.me/test/>

Thanks

As we supposed this problem with theme. It defines fixed height in select position and limit it by screen height.

As a temporary solution, it is possible to add the following CSS rule to "Custom CSS styles" parameter in plugin settings:

```
#main-content .et_pb_fullwidth_header_container {position:relative;overflow:auto;}
```

but better solution is contact theme support so they specify how to show content in full size (with scrolling) in selected element (position).
