
E-mail Request for each results

Posted by emeorg - 2017/03/01 11:58

I have to create an e-mail funnel for each different results. Is it possible to insert a mail request in each results? (if not can i use a Contact 7 snippet or it could cause conflicts?)

Hello,

Do you want to show a form to collect name/email at the end of quiz or need something another?

Regards,
ARI Soft

In the results page. I have to send specific mail for specific results so i need to collect them when user saw the result (It's a medical quiz so the result's description is partial... If the user wants to know more, He has to leave the e-mail adress).

The plugin can show a form where users enter name/email before showing results. Open "Settings" tab on quiz settings page, enable "Collect's user data" parameter and select "Ask user name" and "Ask e-mail" parameters to show the form.

The entered name/email will be shown on "ARI Stream Quiz -> Results" page.

Will it be suitable for your needs if we add "Content before results" and "Content after results" parameter to quiz settings where you can enter HTML code, shortcode and etc.?

Regards,
