## Linking to Infusionsoft

Posted by mrswisesturt - 2017/06/12 17:34

---

One of my clients uses Infusionsoft and I am creating a personality quiz for her which will have 5 different personalities each of which need to be given a different tag so they receive tailored emails.

I was wondering what the best way to set everything up would be as there is no direct API link. I have thought about adding a sign up box with checkboxes to select their personality and then a tag be added which kicks off the follow up sequence but she doesn't want them to know the result first. Is this something that can be done through Zapier or similar?

Hello,

If a quiz is integrated with Zapier, it will send name, email, quiz name and personality to Zapier.

Open "SETTINGS" tab on quiz settings page, check "Collect users' data" checkbox, enable "Ask user name" and/or "Ask e-mail" and "Zapier integration" parameters. Description of how to configure integration with Zapier is available here (find "Zapier integration" parameter).
