
Adding image on email capture form

Posted by ivanverr - 2017/10/23 14:45

Hi,

I need to add an IMAGE of a free gift in the email capture form, that will be sent to user upon quiz completion.

Is it possible to add an html pointing to the image in the custom content boxes (either before or after result area)?

Thanks

=====

Hello,

It is possible to use HTML code in mail template, content before/after results, before/after lead form, but currently HTML is entered in raw format without a WYSIWYG editor.

Regards,
ARI Soft
