PHP 7.0

Posted by tooltester - 2017/11/08 15:32

_____

Hey guys,

We are finally trying to update WordPress to PHP 7.0.

The problem is though that our compatibility checker finds some issues with ARI Stream Quiz (see attached Screenshot).

http://www.ari-soft.com/images/fbfiles/images/ari_quiz-1a6bf5c5b970ebc7ee51dd4b7faf2e22.jpg

What do you recommend? Wait for a plugin update?

_____

My web host recently informed us webmasters that they will discontinue support for PHP 7.0 since it's "not in widespread use." "PHP 7.0 users will be directed to PHP 7.1 instead." Try your compatibility checker with PHP 7.1 and let us know.

_____

The highest it can test is 7.0. But are you saying that the plugin is compatible with 7.1?

_____

Only the developer can tell you if it's compatible with PHP 7.0/7.1. But it looks like 7.1 is better than 7.0 if you're going to upgrade.

Ok thanks. Well, then let's hope the developer will reply.

_____

Hello,

Sorry for the delay. The plugin is compatible with PHP 7.x. We also updated the plugin to v. 1.5.9 to avoid the warnings from compatibility checker, but old versions will also work fine under PHP 7.1.

Regards,
ARI Soft
