
Personality Quiz - Percent from all Points

Posted by marcioaltoe - 2017/12/21 13:08

Hello,

I setup a personality test with 3 different personalities (or results).

Each answer assigns a number of points to one of the personalities and at the end is calculated the percentage in relation to the total points of the three personalities.

Something like:

Personality A: (Personality Points A) / (Points of All Personalities) x 100

Personality B: (Personality Points B) / (Points of All Personalities) x 100

Personality C: (Personality Points C) / (Points of All Personalities) x 100

I think what I need is a parameter like {{userScorePercent}} but using the total points of all personalities.

Can I do this with the Ari Stream Quiz?

Hello,

The plugin calculates score for each personality, but in another way. It looks like:

personality A: (earned points for personality A) / (number of maximum points for personality A) x 100

Is there an alternative? Can I use JS Code to display this percentage in the result?

v. 1.5.16 supports {{userTotalScorePercent}} predefined variable. It shows score as described in your previous message.

It still has not worked.

The percentage is being calculated incorrectly.
