
Mailchimp Integration

Posted by ChantelDriver - 2018/02/08 10:38

Hi There

I am busy setting up my first personality quiz and I have two questions regarding the Mailchimp Integration:

1. I have entered my API key and it is showing most of my Mailchimp lists but not the one in particular that I need to link to.
2. Is it possible to specify a RESULT field in the Mailchimp integration? My Mailchimp list is set up to send specific emails to people based on their quiz result.

Thanks

=====

Hello,

Do you use free or PRO version of the plugin?

Regards,
ARI Soft

We are using Pro.

The Plugin is registered in the name of keith@managerfoundation.com

Try to upgrade the plugin to v. 1.5.22. It should help.

Thanks so much.

Where can I download the latest version?

Under the plugins tab on my Wordpress site I can see that the upgrade is available - it gives the details of the new version with a link to the plugin homepage - but no details of where to download the latest version after you have bought the plugin.

Did you buy the plugin via our site or CodeCanyon?

If you buy it on our site, you can read here how to update the plugin.

Thank you so much.

I have successfully updated the plugin.

I can now see all my Mailchimp Lists - but I still can't see a way to specify the Quiz "RESULT" when it syncs with my Mailchimp list.

I have tested the quiz and it's not pulling the result through automatically either.

Is there a solution for this?

Currently it send only name/email, we are going to extend this functionality in a future version of the plugin to support segmentation.

Hey guys,

Just to say I REALLY think AriSoft Quiz and the forum here has been amazing to work with.

Thank you so much everyone!

I'm now looking at extending my personality quiz and want to be able to integrate it with a mail service - I'm using Mailchimp currently, but would also look at another offering, if that helps.

I'm looking to create different emails for each user, based on the their personality results. I can see I can create things like MERGE tags in Mailchimp, but I can't see whether AriSoft Quiz has any segmentation built into the plug-in already or not.

I've searched on the forum here, and this was the last info I could find

Could you let me know if this has been created yet? And if so, for which email services

Many thanks and thanks again for all your amazing work,

Sally
