Quiz \'jumps\' on iphone

Posted by mrswisesturt - 2018/02/17 14:44

_____

I have a personality quiz that uses a mix of image answers and written answers. On all of them if it is taken on an iphone it jumps to the bottom of the next page (question) rather than the top so people have to scroll up all of the images to get back to the first answer. Is there a way to fix this please? You can see it here: https://dogdesignstudio.com/quiz/take-quiz/

_____

Hello,

Sorry for the delay. Is this problem occurs when "Smart scroll" parameter is enabled in plugin settings? Do you currently disable this option?

Regards,
ARI Soft
