## change placeholder text and field name

Posted by thomasstonesites - 2018/04/16 18:26

---

I use ARI Stream Quiz Pro for developers. What I want to do is that when the quiz is finished and the email form appears, I would like the name request to be labeled as First Name and the placeholder to be labeled as Insert Your First Name. I went to settings and under Collect User's Data, I checked the box for Ask user name. This works, but I like to collect only first names and visitors are inserting their entire name. The list service that I use in Mailchimp.

Can you please tell me which files to edit, where to find them and what to change inside these files?

Hello,

Sorry for the delay. See /ari-stream-quiz/includes/views/quiz-session/tmpl/default.php template file. The following code:

=====
