Quiz results only mailed to admin (incl. userinfo)
Posted by info@stefanhabets.nl - 2018/10/25 10:34

_____

Hi,

I have another question about the plug-in. Is there a way to send the quiz results and filled-out user information to the admin only?

I would like to use the quiz as a sort of intake form where the admin will receive the results. I can hide the .result-content class on the result page and use a textfield to say something like "Thank you for filling out this form" but when a user fills out their e-mail address they will receive the results by default. Is there a way around this?

Thanks in advance!

_____

Hello,

The plugin sends e-mail only to quiz takers, but all results are available for administrators on backend side.

Regards,
ARI Soft

_____

Hi,

thanks again for your fast reply. The admin does show every filled out answer and the 'winning' personality, but is there also a way to see the top 3 personalities for a result in the admin panel, and the score for each of these?

_____

Sorry, but currently the plugin doesn't sort data in this way.

_____

Hey,
so we can't receive any emails results ??
but how can we be notified when someone filled the quizz???

and how can we connect the suscribers to the mailing list ???

Re:Quiz results only mailed to admin (incl. userinfo)

_____

Hello,

The plugin supports integration with popular email marketing services (MailChimp, MailerLite, ActiveCampaign and etc.). Quiz takers can be added to the selected mail lists automatically.

Currently the plugin can send quiz results by email only to quiz takes. All results are available for administrators on backend part of the plugin.

Results mails :
The results sent by email should be one of the first thing that developer should have think about it. it's not practice at all to have to entry in the website to know if someone did the quiz..

Mailing list : i have been creating "mailite" and "mailchimp" account, cause i have sendingblue, but no fonction as Zapier as specified to connect it to sending blue.

and neither of mailchimp and mailite let me adding the new suscribers to any mailing list. i have been adding api, but after... no option to tell the plugin to connect to a specific mailing list ... nothing.

Can you please send me the tutorial to explain me how to do for both of mailchimp, mailite and zapier (the best would be to connect it with sendinblue)
.

thks

Re:Quiz results only mailed to admin (incl. userinfo)
_____

Mailing list is selected in particular quiz settings. Navigate to "ARI Stream Quiz -> Quizzes" page, select a quiz which you want to integrate with email marketing service, open "Settings" tab on quiz edit page, enable "Collect users's data" checkbox and enable "MailChip integration" or "MailerLite integration" or "Zapier integration" checkbox. It is possible to select mailing list for MailerLite/MailChimp directly in quiz settings. For Zapier, a webhook URL is entered in quiz settings and other integration is configured on Zapier side.

_____

how to create webhook for zapier ?? i don't have any tutorial for it

==

Re:Quiz results only mailed to admin (incl. userinfo)
_____

Navigate to "Zapier integration" section on this page and follow instructions.
