Fields example

Posted by fusedesign - 2019/05/10 14:30
_____

Could you help me put 3 more fields in the form to capture leads?

I saw in another post that it is necessary to edit these files:

Hello,

It requires to modify the following files:

- /ari-stream-quiz/includes/views/quiz-session/tmpl/default.php (see quiz-user-data section)

- /ari-stream-quiz/includes/entities/class-quiz-result.php (see extend_bind method)

Regards,
AIR soft
admin

But could you help me? I do not know much about php.

Tks

Danilo

_____

Open /ari-stream-quiz/includes/views/quiz-session/tmpl/default.php template file and find the following code:

Add before it the following code:

Hi!!

Thanks for the feedback!

But it not load the new fields on the page...

Is there another file to change something?

Tks

Danilo

_____

Hello

Thanks for the feedback...
I was able to insert the fields and worked, in the way you explained earlier.

Just one detail: How do I leave these new fields mandatory?

Thank you very much.

Danilo

_____

We will add ability to mark custom fields as required in the future release.

Regards,
ARI Soft

_____

are we able to create custom fields now? I'd like the result to transfer to AC

_____

The plugin doesn't contain a builder to add custom fields. They only can be added manually via changing code like is described in previous posts.

Regards,
ARI Soft
