plugin on mobile device display

Posted by scraper - 2020/04/26 01:46

_____

Hello, I have an issue with the plugin, on a mobile device display when I choose 2 on |Image answers per row| I can see 2 rows on PC display but on mobile just 1 Row, can you help me with a CSS code to get 2 rows on mobile display too. My website display quiz like this
https://imgur.com/Pmh54Ir

https://imgur.com/Pmh54Ir
but i need rusults like this
https://imgur.com/Hk645mS
https://imgur.com/Hk645mS

My regards

_____

Hello,

Open "ARI Stream Quiz -> Settings -> Advanced" page and populate "Custom CSS styles" parameter with the following code:

.asq-theme.asq-theme-buzzfeed .quiz-question-has-image-answer .answer-col-2 .quiz-question-answer-holder {flex-basis: 50% !important}

Regards,
ARI Soft

_____

hello team,

I am planning to purchase the plugin, but only after I can make this work in mobile device (2 image side by side).

I already try the above solution:
.asq-theme.asq-theme-buzzfeed .quiz-question-has-image-answer .answer-col-2 .quiz-question-answer-holder {flex-basis: 50% !important}

But it is not working. In mobile device, it is still the same as usual.

I try this solution: @media (max-width:768px) {

.asq-theme .quiz-question-answer-image IMG {max-width:150px!important}
}

But it does not make the image placed 2 side by side, it is just the same (one image per row), but just smaller image.

Can you kindly help to recheck whether the correct CSS is still valid in the latest version of the plugin?

Note that I am still using the free version, but once this got resolved, I am planning to upgrade to pro version.

Many thanks!

_____

Hello,

Could you provide a link to a page on your site where we can custom CSS rule? It can be affected by styles from 3rd party plugin/theme.

Regards,
ARI Soft

hi,

the page that I use to test is:
https://levencotton.com/test

Please help to check :) Thanks.

_____

Add the following CSS rule:

    @media (max-width: 480px) {
body .asq-theme.asq-theme-buzzfeed .quiz-question-has-image-answer .answer-col-2 .quiz-question-answer-holder
{width: 50%;}
    }

Regards,
ARI Soft

_____

hmm... it is still not working, not sure why

Can you kindly help to take a look again? Maybe we need to wait until tomorrow (Because of cache?)

Thanks.

_____

We don't see the CSS rule on the page. You can try to purge cache.

Regards,
ARI Soft

_____

hi team,

Unfortunately, after I upgrade to pro version (version 1.60), the solution cease to work. I have checked the page source, the correct CSS is already loaded that already contain the above solution, but when we try using mobile (or using mobile simulator) now, the quiz is coming back to the wrong layout.

URL is:
https://levencotton.com/test
https://levencotton.com/test3

(I made test 3 to ensure that it is not because of cache, because it is newly created after I installed the pro version). Also I have purged the cache again.

Can you kindly help to check again? Maybe a new version of CSS is needed for the pro version?

Thanks.

_____

Sorry for the delay. Use the following CSS rule instead of previous one:

@media (max-width: 480px) {
  body .asq-theme.asq-theme-buzzfeed .quiz-question-has-image-answer .answer-col-2 .quiz-question-answer-holder
{width: 50%; flex: 0 0 calc(50% - 1px);}
}

Regards,
ARI Soft
