
Facebook Share results

Posted by voetbalr - 2021/04/01 14:12

I have installed everything and facebook share is working. But if i let users share to see results the citation does not show the results but the link to the quiz.

Can someone explain me why this doesn't work? (can provide login)

The result will be shown when people share quiz AFTER they passed it (you can turn it on in settings). But if it's a forced repost, then there will be just a simple link on quiz.

I guess that's done for people not to cheat: someone can press this button, see his result in preview window, and then just close it, because he has already seen the result.

I think it's the right way to not show the result in a forced repost function.

Thanks for the reply. Is there an adjusted php-file available to make this work?

Users don't have to return to see the results. If they share and see it, it is fine! Would increase virality and reason to share.

Is there any way to force user to share the result on Facebook instead of just the quiz?

Hello,

Currently the plugin doesn't support ability to share results via "Force share" button.

Regards,
ARI Soft
