
Show number of question

Posted by alejandrow - 2021/04/27 14:08

Hello,

I would like to randomize the questions. I know that this can be done in settings, but is it possible to include the number on each question? Now I enter the number manually in front of the question.

But if randomizing questions, these might show as 44 at first and then 7 or 34 and so on. Is it possible to have the number of the questions to be shown and also be corrected when they are being randomized?

Hello,

Remove question index from question title and add the following code to "Custom CSS styles" parameter on "ARI Stream Quiz -> Settings -> Advanced" page:

```
.quiz-question-title::before {  
  content: attr(data-question-index) ' ';  
}
```

Regards,
ARI Soft
