Hello,

ParsedownLegacy.php is included only for PHP version less than 5.3.0 otherwise Parsedown.php is loaded. It is fully compatible with PHP 7.3.

CurlFactory.php contains warnings. It doesn't break functionality, but it can be deprecated in future PHP versions. This file is loaded by 3rd party library. It is used for integration with 3rd party services. We will check updates for it.

ARI Soft
