
Export single answers to csv for personality tests

Posted by StevenPaw - 2021/05/21 17:43

Hello there,

im looking for a way to export all the answers my users choosed to give into a csv.

I can look at individual answers online but cant export all from a personality test to csv. Only the results.

Is there any way to include the individual questions into that csv together with the results? And maybe also a way to add a simple "does your answer fit?"-question after showing the result to the user?

I bought the premium version to get this working but only looking online at individual answers is not enough!

Would be happy for any tips you have!

Hello,

Sorry, but the plugin doesn't support this ability. Currently it exports quiz results (total score, quiz taker name/email and etc).

Regards,
ARI Soft
