
Display scores for multiple personalities

Posted by KS88 - 2021/06/03 13:36

How do I display scores for the different personalities on the front end for users?

I tried {{score}} but that displays only the highest score, I need to display the score for each individual personality.

Hello,

Open quiz settings page and enable "Show several personalities on final page" checkbox on "Personalities" tab. After this open "ARI Stream Quiz -> Settings -> Sharing" page and use {{score}} predefined variable in "Title on result page" parameter for personalities tests.

This doesn't work for me, it displays the highest score for all personalities.

The scores should be 9 for nurturer and 5 for maverick, but it displays as 9 on the results screen for both

Probably something wrong with test/questions settings. Could you provide a link to a test where the problem occurs and a temporary access to WordPress backend by email so we can investigate the problem?

Regards,
ARI Soft
