
Redirection

Posted by Jeremy10k - 2021/09/05 03:04

Hi there,

Have just purchased the Personal version of ARI Stream Quiz for Wordpress, and have three queries:

Loading the Edit Quiz section and saving seem to take particularly long - is there anything I can do to speed it up? (Note that I have 64 questions set up in the quiz if that makes a difference)

Is it possible to automatically redirect the user to another page after they click the final quiz answer?

I see that each answer can have custom text and HTML in it, but when I enter some code to try to redirect, it doesn't save it. The code entered is I don't know if this would work, even if it saved?

Any help is appreciated, thanks.

Hi - any insight into my questions above?

Thanks.

Hello,

Sorry for the delay. We are working on new version of the plugin. It will contains a custom event (when quiz is finished) which can be used to add custom JS code to redirect at the end of quiz. Your code will not work.

Regards,
ARI Soft

Hello,

v. 1.7.0 supports stream_quiz:show_results event. It can be used to define redirect to a custom page when quiz is completed. Add the following code to "Custom JS code" parameter on "ARI Stream Quiz -> Settings -> Advanced" page:

```
jQuery(document).on('stream_quiz:before_show_results', function(ev, data) {  
    var quiz = data.quiz;  
    quiz.showLoading();  
    setTimeout(function() {  
        window.location.href = 'https://www.website.com';  
    }, 10);  
});
```

and add the following code to "Custom CSS styles" parameter on the same page:

```
.quiz-loading>:not(.quiz-loading-pane) {  
  visibility: hidden !important;  
}
```

Regards,
ARI Soft

Hi - thanks for the update, however we had to implement another solution.
