
Shortcode in Personality Results Problem

Posted by yuyu - 2021/10/20 11:38

I want to put a shortcode into the personality quiz results something like this:

Where the bandresult snippet looks at the score to decide what to output.

The problem is the snippet appears to be called when the quiz is first loaded by the page request, before a score is available.

Would it be possible for this to change so that the shortcode was only triggered on the form submit once the score is available, please?

We will add this feature to our TODO list.
