
Sending Quiz Result to Email Provider (MailChimp)

Posted by MaximillianM - 2022/08/14 23:57

Hi,

I would like to send the results of a personality quiz to my email provider, to be used in a personalized email.

It looks like there are these variables that can be used {\$title}{\$score}{\$content} if send by email is checked. Can I pass these variables to MailChimp? If so, would I add "title", "score", "content" as field names? I'm on the most current paid version 1.7.4

Thanks for your help.

Hello,

If send data to MailChimp via Zapier then it is possible to use the following variables on Zapier side:

email
name
quiz
result

Regards,
ARI Soft
